

IKV GROUP NEWS

IKV Group exhibit at the International 'squeak & rattle' exhibition in Munich, Germany.

IKV group were present at the latest International Squeak & rattle forum and introduced the ever expanding range of anti-squeak coatings and lubricants for interior trim including the now well known Krytox materials.

Many Automotive manufacturers and suppliers attended the event which achieved it's aim of gathering together individuals and companies involved in this exciting area of NVH.

IKV Group have dry film and fluid anti-friction coatings under the IKV-Fluor, IKV-Filmsec, Zarox and Triboline brands as well as distributing Krytox lubricants and coatings from Dupont.

Zarox

IKV Develop full range of PFPE based lubricants and coatings under the Zarox brand.

In order to enhance further the already extensive range of Fluorinated lubricants under the IKV-Fluor brand and the Dupont Krytox fluorinated lubricants distributed in Europe, IKV have recently launched the ZAROX range of fluorinated oils, greases and fluid dispersions. Amongst some of the exciting products on offer are UV detectable PFPE based fluids & greases. Zarox lubricants are useful from -90 to +300°C.

O ring lubricants...a speciality range

IKV Group have further developed their extensive range of o ring and rubber coatings and lubricants. The range now includes PTFE and PFPE based coatings and dispersions as well as the more conventional solid lubricant based dry film coatings.

Breathe Easy...Fluor 70 now BAM oxygen approved

IKV have recently had their IKV-Fluor 70 fluid approved for use in Oxygen systems by BAM. This fluid is available as a fluid, dispersion in a carrier for dipping or as an Aerosol. The aerosol allows the application of a thin film of Fluor 70 on seals and application where it is difficult to apply a grease or where a clean appearance is required.

Assembly aids...a helping hand

When fitting hoses, seals or many other rubber components often we find the inherent frictional properties of the rubber make it difficult to fit components together.

IKV Group have developed a full range of fluids, dry film lubricants and gels to aid assembly of rubber and other elastomeric components. The materials are compatible with most compounds and are available either as a temporary lubricant to aid assembly only or as lubricant coating for 'life' to enable disassembly in the future.
