

IKV GROUP NEWS

IKV Group - authorised Automotive distributors for DuPont Krytox Performance lubricants

DuPont Chemical Solutions has authorised IKV Group to distribute their complete range of Krytox Speciality lubricants in the UK and Eire. IKV will specialise in and have exclusivity in the Automotive industry and develop the already well known Krytox brand as a market leader in fluorinated lubricant applications.

The DuPont range of fluorinated lubricants includes PFPE (perfluoropolyether) oils, greases, pastes and dispersions. Also allied to this product range are their fluorinated solvents and Dry Film low molecular weight PTFE dispersions and coatings formerly known under the brand Vydux.

The unique technology and chemistry behind DuPont Krytox products allows their use in the most extreme conditions

and environments without degradation.

The extension in life resulting from their durability along with their superior performance and non toxic nature ensures that Krytox products are used in the most critical applications within Aerospace, Automotive, Chemical, Food, electronics, vacuum and other high tech industries.

The combination of properties that result from the chemistry of the products include:

Thermal Stability—continuously useable at temperatures from -80 to over 300 C.

Chemical inertness—resistant and immiscible in all common chemicals, acids, solvents and fuels.

Biologically inert—Non Toxic and food approved products

Non Flammable—will not support combustion

Extreme Pressure—capable of performing under extreme load conditions

Low friction—fluorinated products with a low coefficient of friction

Please contact IKV Group for further information or samples of Krytox
